## MANAGED SECURITY SERVICES

### MANAGED SIEM SERVICE PROVIDER COMPARISON

Security Information and Event Management (SIEM) has proved itself an essential security solution for enterprises. As SIEM software provides companies with real-time analysis of security alerts, SIEM helps IT teams be more proactive in their fight against security threats.

If you're hiring a company to help with your company's SIEM, you can usually choose from two options: co-managed and managed SIEM. While both solutions have their pros and cons, a co-managed SIEM service may provide you with more benefits as you grow your Security Operations Center (SOC).
